

Getting Started - for Manufacturers

Welcome to the Atonomi Network, which provides security for IoT devices. Atonomi works with manufacturers to enhance security of IoT devices.

Here's how to Get Started:

- Contact Atonomi Onboarding Services at onboarding@atonomi.io
- Our Manufacturers Onboarding Team will assist you in getting established as a manufacturer participating in the Atonomi Identity Registry Network.

Next Steps:

Install MetaMask on the computer(s) you will use for device registration. MetaMask is used to communicate with Ethereum. Log onto MetaMask and select "Main Ethereum Network."

You may also want to install a MetaMask, MyEtherWallet or another ERC20-compliant wallet. (Alternatively, you can transfer funds directly from your Ethereum account.)

Purchase Atonomi Tokens (ATMI) for use in paying for device registration and, if desired, device Activation.

Use the credentials supplied by the Atonomi Network to log onto the Atonomi Manufacturer's portal (<https://registration.atonomi.net>) and begin registering your IoT devices.

For More Information: Please go to <https://github.com/atonomi> where you can download the Atonomi Embedded SDK, the Atonomi Smart Contract, the Atonomi Quick Start Guide for Developers, and other resources.
